Agri-Drone

Report: problem zones in the crop stand

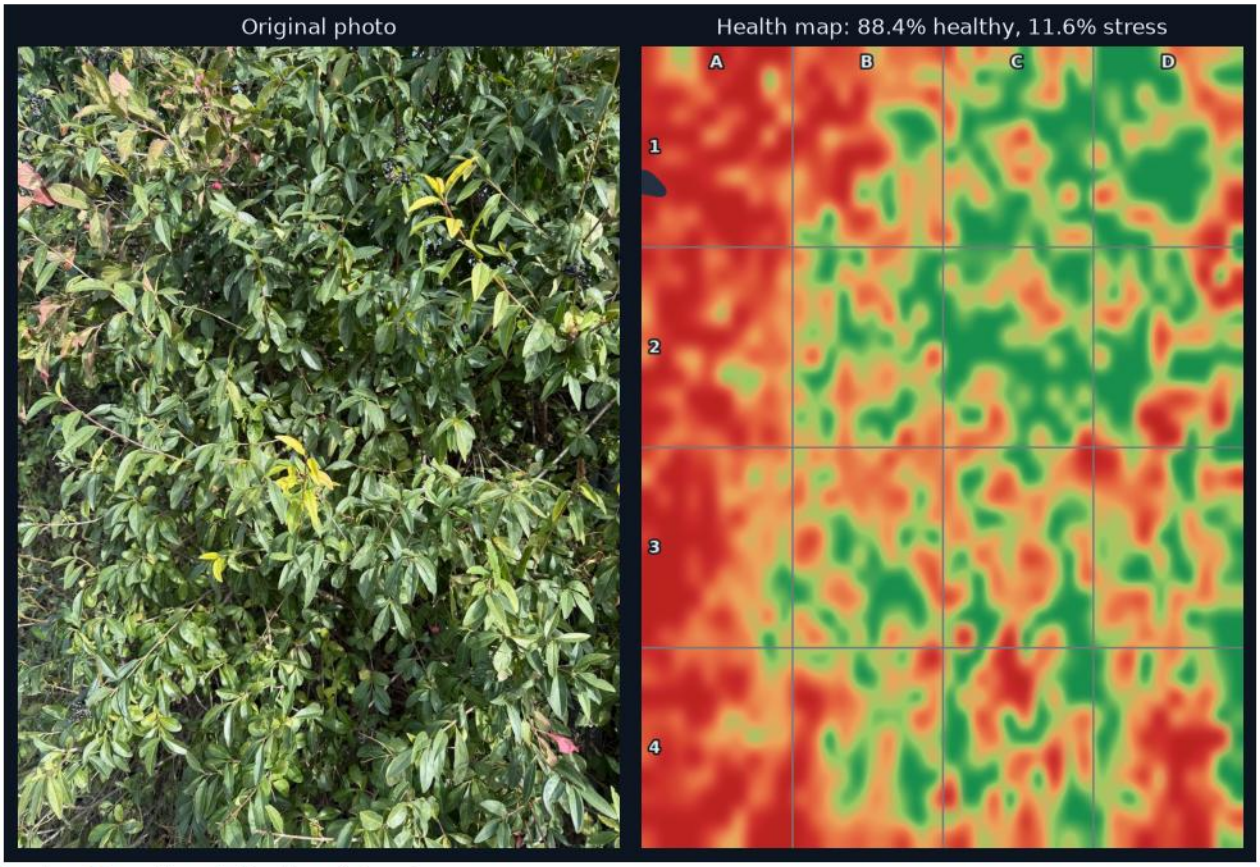
26.10.2026

ExG

Location: Vienna garden, Vienna

99.9%	88.4%	11.6%	15
Plant cover	Healthy	Stress	Zones

Check first (8 of 15): A1, B1, A2, D2, A3, A4, C4, D4



Scale: weak transition healthy no plants

Result

Part of the area looks different. The marked zones should be checked on site.

The map shows anomalies in plant growth (ExG index), not a diagnosis. Cause and measures are determined by an agronomist.

Note October–November: yellowing of deciduous trees is natural autumn, not stress. Lawn, crops and evergreens are assessed.

What to do

- Find the marked zones in the planting.
- Check plants and soil on site.
- If something looks wrong, involve an agronomist.
